A neutralization reaction occurs between an acid and a base and produces water and a salt. The final solution is closer to a neutral pH than either the acid or base alone. Hydrochloric acid (HCl) reacts with potassium hydroxide (KOH), producing a solution of potassium chloride (KCl) and water (H<sub>2</sub>O).

Hard and Soft Acids and Bases (HSAB) Principle is a qualitative concept introduced by Ralph Pearson to explain the stability of metal complexes and the mechanisms of their reactions. However, it is also possible to quantify this concept based on Klopman's FMO analysis using interactions between HOMO and LUMO.

The new Pearson Chemistry program combines our proven content with cutting-edge digital support to help students connect chemistry to their daily lives. With a fresh approach to problem-solving, a variety of hands-on learning opportunities, and more math support than ever before, Pearson Chemistry will ensure success in your chemistry classroom. Our program provides features and resources unique to Pearson—including the Understanding by Design Framework and powerful online resources to engage and motivate your students, while offering support for all types of learners in your classroom.

This book chronicles the proceedings of the Symposium on Acid-Base Interactions: Relevance to Adhesion Science and Technology held on the occasion of the 75th birthday of Professor Frederick M. Fowkes as a part of the 64th Colloid and Surface Science Symposium held at Lehigh University, June 18–20, 1990. The book contains 22 papers which are divided into three sections. Topics covered include: Acid-base concepts: historical account, current status, and prospects for the future; quantum-mechanical approach to understanding acid-base interactions at metal-polymer interfaces; assessment of acidbase interactions at solid-liquid interfaces; quantitative characterization of the acid-base properties of solvents, polymers and inorganic surfaces (overview by Professor Fowkes); acid-base characteristics of a variety of solid materials (clay minerals, carbon fibers, glass fibers, silicas, metals, polymers); acid-base interactions in wetting; applications of acid-base interactions in a variety of situations, e.g. in the adhesion of polymers to metallic and ceramic substrates; mechanical properties of wood; properties of filled polymers, and behavior of fiber-reinforced polymer composites.

Develop and assess your students' knowledge and skills throughout A level with worked examples, practical assessment guidance and differentiated end of topic questions in this updated, all-in-one textbook for Years 1 and 2. Combining everything your students need to know for the Pearson Edexcel A level Chemistry specification, this revised textbook will: - Identify the level of your students' understanding with diagnostic questions and a summary of prior knowledge at the start of the Student Book. - Provide support for all 16 required practicals with various activities and questions, along with a 'Practical' chapter covering procedural understanding and key ideas related to measurement. - Improve mathematical skills with plenty of worked examples, including notes on methods to help explain the strategies for solving each type of problem. - Offer plenty of practice with 'Test yourself' questions to help students assess their understanding and measure progress. - Encourage further reading and study with short passages of extension material. - Develop understanding with free online access to 'Test yourself' answers and an extended glossary.

This latest edition of The Pearson General Studies Manual continues to provide exhaustive study material for the General Studies paper of the UPSC Civil Services Preliminary Examination.
