Olivier Blanchard, former chief economist of the International Monetary Fund (IMF), is author of one of the most important standard macroeconomics textbooks which is used throughout the world. Endorsed by Blanchard himself, *Anti-Blanchard Macroeconomics* critically analyses prevailing economic theory and policy in comparison with alternative approaches. This textbook is designed to stand alongside Blanchard's text, or indeed any other standard book on macroeconomics, but it can also be read independently. It provides undergraduate and advanced students with a critical view of the subject, and is also appropriate for scholars interested in a new way of analysing the debate between alternative schools of economic thought.

What will economic policy look like once the global financial crisis is finally over? Will it resume the precrisis consensus, or will it be forced to contend with a postcrisis "new normal"? Have we made progress in addressing these issues, or does confusion remain? In April of 2015, the International Monetary Fund gathered leading economists, both academics and policymakers, to address the shape of future macroeconomic policy. This book is the result, with prominent figures - including Ben Bernanke, Robert Rubin, and Paul Volcker - offering essays that address topics that range from the measurement of systemic risk to foreign exchange intervention. The chapters address whether we have entered a "new normal" of low growth, negative real rates, and deflationary pressures, with contributors taking opposing views; whether new financial regulation has stemmed systemic risk; the effectiveness of macroprudential tools; monetary policy, the choice of inflation targets, and the responsibilities of central banks; fiscal policy, stimulus, and debt stabilization; the volatility of capital flows; and the international monetary and financial system, including the role of international policy coordination. In light of these discussions, is there progress or confusion regarding the future of macroeconomic policy? In the final chapter, volume editor Olivier Blanchard answers: both. Many lessons have been learned; however, as the chapters of the book reveal, there is no clear agreement on several key issues. -- from dust jacket.

Just as macroeconomic models describe the overall economy within a changing, or dynamic, framework, the models themselves change over time. In this text Stephen J. Turnovsky reviews in depth several early models as well as a representation of more recent models. They include traditional (backward-looking) models, linear rational expectations (future-looking) models, intertemporal optimization models, endogenous growth models, and continuous time stochastic models. The author uses examples from both closed and open economies. Whereas others commonly introduce models in a closed context, tacking on a brief discussion of the model in an open economy, Turnovsky integrates the two perspectives throughout to reflect the increasingly international outlook of the field. This new edition has been extensively revised. It contains a new chapter on optimal monetary and fiscal policy, and the coverage of growth theory has been expanded substantially. The range of growth models considered has been extended, with particular attention devoted to transitional dynamics and nonscale growth. The book includes cutting-edge research and unpublished data, including much of the author's own work.
