Agrobacterium is a plant pathogen which causes the "crown-gall" disease, a neoplastic growth that results from the transfer of a well-defined DNA segment ("transferred DNA", or "T-DNA") from the bacterial Ti (tumor-inducing) plasmid to the host cell, its integration into the host genome, and the expression of oncogenes contained on the T-DNA. The molecular machinery, needed for T-DNA generation and transport into the host cell and encoded by a series of chromosomal (chv) and Ti-plasmid virulence (vir) genes, has been the subject of numerous studies over the past several decades. Today, Agrobacterium is the tool of choice for plant genetic engineering with an ever expanding host range that includes many commercially important crops, flowers, and tree species. Furthermore, its recent application for the genetic transformation of non-plant species, from yeast to cultivated mushrooms and even to human cells, promises this bacterium a unique place in the future of biotechnological applications. The book is a comprehensive volume describing Agrobacterium's biology, interactions with host species, and uses for genetic engineering.

Predicting the future is a risky game, and can often leave egg on one's face. However when the organizers of the Intelligent Virtual Environments workshop at the European Conference on AI predicted that the field of Intelligent Virtual Agents would grow and mature rapidly, they were not wrong. From this small workshop spawned the successful one on Intelligent Virtual Agents, held in Manchester in 1999. This volume comprises the proceedings of the much larger third workshop held in Madrid, September 10 11, 2001, which successfully achieved the aim of taking a more international focus, bringing together researchers from all over the world. We received 35 submissions from 18 different countries in America, Asia, and Africa. The 16 papers presented at the conference and published here show the high quality of the work that is currently being done in this field. In addition, five contributions were selected as short papers, which were presented as posters at the workshop. This proceedings volume also includes the two prestigious papers presented at the workshop by our keynote speakers: Daniel Thalmann, Professor at the Swiss Federal Institute of Technology (EPFL) in Lausanne and Director of the Computer Graphics Lab, who talked about The Foundations to Build a Virtual Human Society, Jeff Ricketl, Project Leader at the Information Sciences Institute and a Research Assistant Professor in the Department of Computer Science at the University of Southern California, who debated about Intelligent Virtual Agents for Education and Training: Opportunities and Challenges.

Should law be technologically neutral, or should it evolve as human relationships with technology become more advanced? In Law in an Era of "Smart" Technology, Susan Brenner analyzes the complex and evolving interactions between law and technology and provides a thorough and detailed account of the law in technology at the beginning of the 21st century. Brenner draws upon recent technological advances, evaluating how developing technologies may alter how humans interact with each other and with their environment. She analyzes the development of technology as shifting from one of "use" to one of "interaction," and argues that this interchange needs us to reconceptualize our approach to legal rules, which were originally designed to prevent the "misuse" of older technologies. As technologies continue to develop over the next several decades, Brenner argues that the laws directed between human and technological relationships should remain neutral. She explains how older technologies rely on human implementation, but new "smart" technology will be completely automated. This will eventually lead to, as she explains, the ultimate progression in our relationship with technology: the fusion of human physiology and technology. Law in an Era of "Smart" Technology provides a detailed, historically-grounded explanation as to why our traditional relationship with technology is evolving and why a corresponding shift in the law is imminent and necessary.

This text offers RS/6000 administrators and users step-by-step advice for managing their AIX environment. Each chapter offers detailed command descriptions, examples, diagrams and troubleshooting tips, and ends with an outline and keyword glossary. The book covers a range of information on how to use administration tools, boot up and shut down a system, add new devices, manoeuver through the file system, control processes, use E-mail services, configure X and boot security.

This volume constitutes the refereed proceedings of the Third International Conference on Computational Intelligence, Security and Internet of Things, ICCISIoT 2020, held in Agartala, India, in December 2020. Due to the COVID-19 pandemic the conference was held online. The 23 full papers and 4 short papers were carefully reviewed and selected from 113 submissions. The papers are organised according to the following topics: computational intelligence, security, and internet of things. .

Although readily admitting the importance of combat service support forces, military students and historians alike tend to concentrate on combat and combat support units when studying operations, giving only passing attention to the vital work of the logisticians, signalmen, transport troops, and the rest. This is regrettable, for the operations of combat service support units-especially in a global conflict like World War II with its vast distances and varied terrains-have much to teach us about modern warfare, lessons that remain of surpassing importance to our profession. The Medical Department: Medical Service in the European Theater of Operations supports the proposition that the experience of medical personnel in war directly stimulates advances in medical science. More importantly, it demonstrates that the organization of health care in the combat zones, including evacuation of the wounded, control of disease among troops and civilian populations, and care of prisoners of war, contributed directly to the Allied victory. The exploits of the doctors, corpsmen, and medical support units provide a model for the planning and organization of medical support in today's Army. This volume continues a subseries begun in 1966 with the study of medical support of the Army in the Mediterranean Theater. The Center of Military History will soon complete this project with the publication of a similar study of the very different challenges faced by the Medical Department in the Pacific.

This book presents the conference proceedings of the 25th edition of the International Joint Conference on Industrial Engineering and Operations Management. The conference is organized by 6 institutions (from different countries and continents) that gather a large number of members in the field of operational management, industrial engineering and engineering management. This edition of the conference had the title: THE NEXT GENERATION OF PRODUCTION AND SERVICE SYSTEMS in order to emphasize unpredictable and very changeable future. This conference is aimed to enhance connection between academia and industry and to gather researchers and practitioners specializing in operation management, industrial engineering, engineering management and other related disciplines from around the world.
