There has been an exponential increase in desalination capacity both globally and nationally since 1960, fueled in part by growing concern for local water scarcity and made possible to a great extent by a major federal investment for desalination research and development. Traditional sources of supply are increasingly expensive, unavailable, or controversial, but desalination technology offers the potential to substantially reduce water scarcity by converting the almost inexhaustible supply of seawater and the apparently vast quantities of brackish groundwater into new sources of freshwater. Desalination assesses the state of the art in relevant desalination technologies, and factors such as cost and implementation challenges. It also describes reasonable long-term goals for advancing desalination technology, posits recommendations for action and research, estimates the funding necessary to support the proposed research agenda, and identifies appropriate roles for governmental and nongovernmental entities.

It also addresses such topics as community policing, use of force, racial profiling, and evaluates the success of common police techniques, such as focusing on crime "hot spots." It goes on to look at the issue of legitimacy "how the public gets information about police work, and how police are viewed by different groups, and how police can gain community trust. *Fairness and Effectiveness in Policing* will be important to anyone concerned about police work: policy makers, administrators, educators, police supervisors and officers, journalists, and interested citizens.

The assessment of young children's development and learning has recently taken on new importance. Private and government organizations are developing programs to enhance the school readiness of all young children, especially children from economically disadvantaged homes and communities and children with special needs. Well-planned and effective assessment can inform teaching and program improvement, and contribute to better outcomes for children. This book affirms that assessments can make crucial contributions to the improvement of children's well-being, but only if they are well designed, implemented effectively, developed in the context of systematic planning, and are interpreted and used appropriately. Otherwise, assessment of children and programs can have negative consequences for both. The value of assessments therefore requires fundamental attention to their purpose and the design of the larger systems in which they are used. *Early Childhood Assessment* addresses these issues by identifying the important outcomes for children from birth to age 5 and the quality and purposes of different techniques and instruments for developmental assessments.

“ In this groundbreaking book, Francesca Gino shows us how to spark creativity, excel at work, and become happier: By learning to rebel. ” — Charles Duhigg, New York Times bestselling author of The Power of Habit and Smarter Faster Better Do you want to follow a script — or write your own story? Award-winning Harvard Business School professor Francesca Gino shows us why the most successful among us break the rules, and how rebellion brings joy and meaning into our lives. Rebels have a bad reputation. We think of them as troublemakers, outcasts, contrarians: those colleagues, friends, and family members who complicate seemingly straightforward decisions, create chaos, and disagree when everyone else is in agreement. But in truth, rebels are also those among us who change the world for the better with their unconventional outlooks. Instead of clinging to what is safe and familiar, and falling back on routines and tradition, rebels defy the status quo. They are masters of innovation and reinvention, and they have a lot to teach us. Francesca Gino, a behavioral scientist and professor at Harvard Business School, has spent more than a decade studying rebels at organizations around the world, from high-end boutiques in Italy ’ s fashion capital, to the World ’ s Best Restaurant, to a thriving fast food chain, to an award-winning computer animation studio. In her work, she has identified leaders and employees who exemplify “ rebel talent, ” and whose examples we can all learn to embrace. Gino argues that the future belongs to the rebel — and that there ’ s a rebel in each of us. We live in turbulent times, when competition is fierce, reputations are easily tarnished on social media, and the world is more divided than ever before. In this cutthroat environment, cultivating rebel talent is what allows businesses to evolve and to prosper. And rebellion has an added benefit beyond the workplace: it leads to a more vital, engaged, and fulfilling life. Whether you want to inspire others to action, build a business, or build more meaningful relationships, Rebel Talent will show you how to succeed — by breaking all the rules.
