Carbides Nitrides

Refractory carbides and nitrides are materials with a high melting point, arbitrarily selected as greater than 1800°C and must have a high degree of chemical stability. Carbides and nitrides can be divided into several types depending on

The refractory carbides and nitrides are reviewed together in one book because : □ They form two families of closely related materials which have similar atomic structures and chemistry. Carbon and nitrogen are next to each other the second period of the Table of the Elements and, in many cases, the carbides and nitrides form solid solutions (known as carbonitrides)
