RX2-SD160W. Product superiority, reliability and innovative technology are captured with our signature new generation Continuous IJ Printer. The Hitachi RX2 Series industrial small character high speed printer, categorized as a non-contact marking system, prints variable product information directly on various substrates. The IJ printer is capable of marking and coding various product materials such as metals, plastics, rubbers, films and papers.

RX2-SD160W - Hitachi Industrial Components 4 Equipment
Hitachi inkjet printers are dedicated to high quality components. This is why a dedicated viscometer is still used to measure our inks condition. Other printers rely on a theoretical calculation in order to determine viscosity as a means to cut manufacturing costs but Hitachi knows that having a dynamic reaction to the ink provides better control and more stability.

Clinical Biochemistry: Contemporary Theories and Techniques, Volume 3 broadens the scope of clinical biochemistry, discussing relevant aspects of serology, microbiology, monoclonal antibody techniques, and instrumentation. This volume includes the biochemical monitoring of cancer, use of chemical and physiochemical approaches to detecting and identifying etiological agents in clinical specimens, and monoclonal antibodies in clinical investigations. The serologic methods in disease diagnosis, instrumentation in clinical chemistry, and hemoglobin analysis and hemoglobinopathies are also deliberated. This text likewise covers the conventional microbiological techniques, serology of streptococcal infections, and impact of microprocessors on clinical instrumentation. This book is a good reference for clinicians interested in theories and techniques related to clinical biochemistry.

PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the latest products and services. Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology.

Main topics concern following directions, finding your way around, making wise purchases, managing money, and finding, landing, and keeping a job - so the book is stuffed with things like directions for product assembly and operation, maps, advertisements, checkbook registers, and job applications. Students learn to decipher the wide variety of written materials we all encounter in daily life with 60 ready-to-reproduce documents accompanied by reproducible activity sheets. Well-suited for ESL, ELL, and adult education. Answer keys. Illustrated. Grades 6-9. 248 pages.

This book discusses recent developments in electroluminescent (EL) displays, in particular thin-film EL displays, which are all-solid emissive displays with fast response, wide viewing angle, high resolution, wide operating temperature ranges and good display qualities. First, the characteristics of four types of EL devices are presented, and the physics of ac thin-film EL devices are detailed, including ideal models, measuring and evaluation methods, high-field electronic transport and properties of phosphor materials. The book emphasizes recent developments in phosphor materials for color thin-film EL devices based on ZnS, SrS, CaS and CaGa2S4, and multicolor thin-film EL panels in four-panel structures. Other important features discussed are drive methods and reliability issues.
