The purpose of this manual is to standardize instructions, methods, terminology and standard time data applicable to work measurement and the development of labor performance standards. The use of this manual is intended to: a. Maximize the productivity of industrial/management engineering personnel by providing a more rapid means of establishing labor performance standards and eliminating duplication in labor performance standards development. b. Foster the increased use of engineered performance standards by making available standard time data of stated accuracy and reliability structured for maximum ease of application. c. Promote appropriate application of more efficient methods of performing work. d. Provide uniformity in labor performance standards development by standardizing the application of various work measurement techniques. e. Facilitate communication by providing common terminology and definitions.

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.
