Awakening in a bleak landscape, Cass Dollar vaguely recalls enduring something terrible. Having no idea how many days/or weeks have passed, she slowly realizes the horrifying truth: her daughter, Ruthie, has vanished. And with her, nearly all of civilization. Instead of winding through the once-lush hills, the roads today see only cannibalistic Beaters/people turned hungry for human flesh by a government experiment gone wrong. In a broken, barren California, Cass will undergo a harrowing quest to get Ruthie back. Few people trust an outsider, much less one who bears the telltale scars of a Beater attack, but she finds safety with an enigmatic outlaw, Smoke. And she'll need him more than ever when his ragged band of survivors learn that she and Ruthie have become the most feared, and desired, weapons in a brave new world.

Known for accuracy, precision, and rigor, Soo Tan now brings those same qualities to the Calculus course. With his clear, concise writing style, and use of relevant, real world examples, Tan introduces abstract mathematical concepts with his intuitive approach that captures student interest without compromising mathematical rigor. In keeping with this emphasis on conceptual understanding, each exercise set begins with concept questions and each end-of-chapter review section includes fill-in-the-blank questions which help students master the definitions and theorems in each chapter. Additionally, many questions asking for the interpretation of graphical, numerical, and algebraic results are included among both the examples and the exercise sets. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

A collection of eight critical essays on the classical tragedy, arranged in the chronological order of their original publication.

Fans of Maggie Stiefvater and Colleen Houck will love this epic tale of forbidden romance and nail-biting action from New York Times bestselling author Sophie Jordan. In the climactic finale to the steamy Firelight series, Jacinda must fight to save her life, her love, and all of her kind. If Jacinda were to follow the wishes of her community, she'd happily settle down with Cassian, the prince of her pride. But she just can't. She's in love with Will, a human boy who comes from a family of hunters. Their relationship breaks the most sacred rule and endangers everyone she cares about. Now Jacinda, Will, and Cassian fight back against the hunters and their shadowy allies who would destroy them all. . . .

Designed as one of the first true textbooks on how to use the UNIX operating system and suitable for a wide variety of UNIX-based courses, UNIX and Shell Programming goes beyond providing a reference of commands to offer a guide to basic commands and shell programming. Forouzan/Gilberg begin by introducing students to basic commands and tools of the powerful UNIX operating system. The authors then present simple scriptwriting concepts, and cover all material required for understanding shells (e.g., Regular Expressions, grep, sed, and awk) before introducing material on the Korn, C, and Bourne shells. Throughout, in-text learning aids encourage active learning and rich visuals support concept presentation. For example, sessions use color so students can easily distinguish user input from computer output. In addition, illustrative figures help student visualize what the command is doing. Each chapter concludes with problems, including lab sessions where students work on the computer and complete sessions step-by-step. This approach has proven to be successful when teaching this material in the classroom.
