The life and role of Maurice Strong is key to understanding how the myth of anthropogenic global warming was created and how it was used to establish the context for Agenda 21, arguably the most significant and most secretive plan for global transformation we have witnessed; more significant than the two world wars of the last century. As such, I feel it is important to understand how this has ...

THE No Holding Back report on reasons for Labour’s loss of support among working-class communities merits serious attention. While Brexit looms large, it looks at the longer-term alienation from Labour in many regions and forces socialists to confront the disconcerting reality that the Tories lead Labour among the poorest socio-economic categories.

This key textbook provides a comprehensive and up-to-date account of developments in international communication worldwide. Taking a comparative approach to the major theories of global media, Terry Flew looks at the rise of global media production networks and the emergence of 'media cities', multiculturalism, and the question of a global media culture. This engaging book raises the question of whether we are now in a 'post-global' age, and discusses whether there is a stable global communications order, or instead a stage of increased competition among digital and traditional media, and between the US and emergent powers such as China. Drawing on a wide range of perspectives, and written by a renowned author, this is an essential introduction for undergraduate and postgraduate students of media studies, communication studies and cultural studies, and anyone interested in the study of media and globalization.

Fully revised to incorporate recent developments, this fourth edition of Understanding Global Security analyses the variety of ways in which people's lives are threatened and/or secured in contemporary global politics. The traditional focus of Security Studies texts: war, deterrence and terrorism, are analysed alongside non-military security issues such as famine, crime, disease, disasters, environmental degradation and human rights abuses to provide a comprehensive survey of how and why people are killed in the contemporary world. This new edition features: Greater coverage of the evolving theoretical literature on security, including more analysis of critical theory perspectives and emerging schools of thought. Reflections on recent developments in the conflicts in Syria and Ukraine. New data and cases on poverty, hunger and depression and greater analysis of the social and political implications of the prolonged period of stagnation the global economy has gone through. New content reflecting the recent resurgence in populist nationalism evident in the election of Trump in the USA, the UK’s exit from the EU and the authoritarian turn taken in many countries. Analysis of the 2015 Paris climate change treaty and the international responses to recent pandemics such as Ebola and Zika A new section has been included on suicide, plugging a gap evident in the earlier editions. User-friendly and easy to follow, this highly acclaimed and popular academic textbook is designed to make a complex subject accessible to all and will continue to be essential reading for everyone interested in security.

This volume brings together selected articles published in University World News (UWN) and International Higher Education (IHE) between 2011 and 2016. Researchers, policy makers, and practitioners alike further the development of higher education as a field of study through public and ongoing conversations. It is news, analysis, and commentary publications like UWN and IHE that facilitate this dialogue and keep pace with the most up-to-date developments in the field. Together, the articles included in this volume-alongside the section introductions-offer a rich and relevant picture of the dynamic state of higher education globally. While both publications are freely available online, this book provides a thematically coherent selection of articles, offering an accessible and analytic perspective on the pressing concerns of contemporary higher education.

Over the course of the past thirty years, there has been an explosion of work on sexuality, both conceptually and methodologically. From a relatively limited, specialist field, the study of sexuality has expanded across a wide range of social sciences. Yet as the field has grown, it has become apparent that a number of leading edge critical issues remain. This theory-building book explores some of the areas in which there is major and continuing debate, for example, about the relationship between sexuality and gender; about the nature and status of heterosexuality; about hetero- and homo-normativity; about the influence and

intersection of class, race, age and other factors in sexual trajectories, identities and lifestyles; and about how best to understand the new forms of sexuality that are emerging in both rich world and developing world contexts. With contributions from leading and new scholars and activists from across the globe, this book highlights tensions or 'flash-points' in contemporary debate, and offers some innovative ways forward in terms of thinking about sexuality - both theoretically and with respect to policy and programme development. An extended essay by Henrietta Moore introduces the volume, and an afterword by Jeffrey Weeks offers pointers for the future. The contributors bring together a range of experiences and a variety of disciplinary perspectives in engaging with three key themes of sexual subjectivity and global transformations, sexualities in practice, and advancing new thinking on sexuality in policy and programmatic contexts. It is of interest to students, researchers and activists in sexuality, sexual health and gender studies, especially those working from public health, sociological and anthropological perspectives.

Since the end of the Cold War, interaction among communities across the globe has increased exponentially. Globalization has changed how we live, how we communicate, what we eat, and how we travel around the world. What do such social, political, and economic changes mean in a twenty-first-century context? Understanding the Global Community explores these and other key questions, offering a concise overview of contemporary topics in international relations. Edited by Zach P. Messitte and Suzette R. Grillot, with contributions from prominent scholars across various disciplines, this accessible survey is perfectly suited for undergraduate courses in international and area studies as well as for anyone seeking a clearer understanding of today's major global concerns. Unique in its approach, Understanding the Global Community examines both international issues and regional perspectives. The first half of the book explores overarching global themes, including American foreign policy, international security, humanitarian intervention, and the global economy. The second half addresses nationalism and its challenge to the development of a global community, with region-specific chapters focusing on historic and contemporary issues in China, Europe, Latin America, and the Middle East. A glossary at the end of the book provides useful definitions of key terms and concepts.

Helpman explains what shapes international production and distribution of goods and the resulting trade flows, and provides a clear, original account of the trade-theory revolutions of the 1980s and the post-recession. Though it contains no equations, Understanding Global Trade is mathematical in its elegance, precision, and power of expression.
