"It has been found that the primary difference between the superior and average undergraduate psychology student was not in the command of factual materials, but in familiarity with the philosophy of science. The better students were more able to separate science from non-science, and to critically evaluate materials presented to them. This book provides a large and diverse sample of subject material to which the student may apply the structural rules and attitudes of the scientific method. In the introductory material, four attitudes are stressed: (1) empiricism, (2) determinism, (3) parsimony, and (4) scientific

manipulation. Each short sample is followed by a series of discussion cues relating each attitude to the text, and, after four samples representing a complete panel discussion, evaluation sheets are included. Summary evaluations are found periodically throughout the book." -- Foreword.

Traditional psychotherapy approaches, focusing on working with and correcting mental events and conditions, have placed little importance on the fundamentally physical nature of the person. Yet many of the problems people bring to therapy are linked with or manifested in the body--such as obesity, psychosomatic distress, chronic tension, and sexual problems. This book provides a therapeutic approach that addresses both the physical and mental nature of clients. In this book, James Kepner shows that a client's posture, movements, and bodily experiences are indeed relevant to therapy, and he offers an insightful framework for incorporating these aspects into a therapeutic framework. This comprehensive treatment explains how body work can be integrated with the aims, methods, and philosophy of psychotherapy, offering a framework within which practitioners of different theoretical approaches can better appreciate body processes in the context of the whole person, rather than as isolated events. This book, including an updated introduction by the author, explores the range of body work in psychotherapy, from the development of body awareness to intensive work with physical structure and expression. And it demonstrates how this approach can be particularly effective with a range of clients, including survivors of sexual abuse, recovering drug addicts or alcoholics, or those suffering from chronic illness.
