While this characterization may be true of the type of philosophy labeled postmodern in the 1980s and 1990s, David Ray Griffin argues that Alfred North Whitehead had formulated a radically...

**Whitehead's Radically Different Postmodern Philosophy: An**

Examines the postmodern implications of Whitehead ' s metaphysical system.

The mind-body problem, which Schopenhauer called the "world-knot," has been a central problem for philosophy since the time of Descartes. Among realists--those who accept the reality of the physical world--the two dominant approaches have been dualism and materialism, but there is a growing consensus that, if we are ever to understand how mind and body are related, a radically new approach is required. David Ray Griffin develops a third form of realism, one that resolves the basic problem (common to dualism and materialism) of the continued acceptance of the Cartesian view of matter. In dialogue with various philosophers, including Dennett, Kim, McGinn, Nagel, Seager, Searle, and Strawson, Griffin shows that materialist physicalism is even more problematic than dualism. He proposes instead a panexperientialist physicalism grounded in the process philosophy of Alfred North Whitehead. Answering those who have rejected "panpsychism" as obviously absurd, Griffin argues compellingly that panexperientialism, by taking experience and spontaneity as fully natural, can finally provide a naturalistic account of the emergence of consciousness--an account that also does justice to the freedom we all suppose in practice.

An original consideration of the temporal in digital art and aesthetics

As advanced by astronomer-cosmologist Sir Fred Hoyle, astronomy, biology, astrobiology, astrophysics, and cosmology converge agreeably with natural theology. In The Big Bang and God, these interdisciplinary convergences are developed by an astronomer collaborating with a theologian.

In presenting Peirce, James, Bergson, Whitehead, and Hartshorne as members of a common and distinctively postmodern trajectory, this book casts the thought of each of them in a new light. It also suggests a new direction for the philosophical community as a whole, now that the various forms of modern philosophy, and even the deconstructive form of postmodern philosophy, are widely perceived to be dead-ends. This new option offers the possibility that philosophy may recover its role as critic and guide within the more general culture, a recovery that is desperately needed in these perilous times.

For scholars working on almost any aspect of American thought, The Bloomsbury Encyclopedia to Philosophers in America presents an indispensable reference work. Selecting over 700 figures from the Dictionary of Early American Philosophers and the Dictionary of Modern American Philosophers, this condensed edition includes key contributors to philosophical thought. From 1600 to the present day, entries cover psychology, pedagogy, sociology, anthropology, education, theology and political science, before these disciplines came to be considered distinct from philosophy. Clear and accessible, each entry contains a short biography of the writer, an exposition and analysis of his or her doctrines and ideas, a bibliography of writings and suggestions for further reading. Featuring a new preface by the editor and a comprehensive introduction, The Bloomsbury Encyclopedia to Philosophers in America includes 30 new entries on twenty-first century thinkers including Martha Nussbaum and Patricia Churchland. With in-depth overviews of Waldo Emerson, Margaret Fuller, Noah Porter, Frederick Rauch, Benjamin Franklin, Thomas Paine and Thomas Jefferson, this is an invaluable one-stop research volume to understanding leading figures in American thought and the development of American intellectual history.

Beyond Whitehead brings the reader up to date with the latest developments in process philosophy, concerning the study its basic concepts and their roots, and its potential extensions and revisions.

This book argues for the reality of multiple religious ultimates rather than just one. This entails that all the religions are not the same; they describe different religious objects, and they each provide unique forms of salvation. The immediate advantage of this approach is that it explains how all religions are equally valid without glossing over the real differences that define them. Put differently, each religion has correctly identified a piece of the puzzle that makes up Ultimate Reality. There is, however, a limit to the plurality, and thus five distinct religious ultimates are identified: the Forms, God, A World, Creativity, and the Receptacle. One or two of these five ultimates are found within all of the world's religions, as evidenced by religious scriptures and religious experiences. Based upon these five religious ultimates, this book puts forth a novel philosophical and religious system: cosmosynthesis, a word emphasizing the likelihood that in the beginning, there was more than just God. Quite possibly, there may have been five ultimates, each sacred in its own way, none of which could have existed without the reality of the others.

Process thought is the foundation for studies in many areas of contemporary philosophy, theology, political theory, educational theory, and the religion-science dialogue. It is derived from Alfred North Whitehead's philosophy, known as process theology, which lays a groundwork for integrating evolutionary biology, physics, philosophy of mind, theology, environmental ethics, religious pluralism, education, economics, and more. In Process-Relational Philosophy, C. Robert Mesle breaks down Whitehead's complex writings, providing a simple but accurate introduction to the vision that underlies much of contemporary process philosophy and theology. In doing so, he points to a "way beyond both reductive materialism and the traps of Cartesian dualism by showing reality as a relational process in which minds arise from bodies, in which freedom and creativity are foundational to process, in which the relational power of persuasion is more basic than the unilateral power of coercion." Because process-relational philosophy addresses the deep intuitions of a relational world basic to environmental and global thinking, it is being incorporated into undergraduate and graduate courses in philosophy, educational theory and practice, environmental ethics, and science and values, among others. Process-Relational Philosophy: A Basic Introduction makes Whitehead's creative vision accessible to all students and general readers.

This is the first collective study of the development of philosophy in America, from the 18th century to the present. Leading experts examine distinctive features of American philosophy, trace notable themes, and consider the legacy of key figures. A fascinating resource for anyone interested in modern philosophy or American intellectual history.
